TOLULOPE OBASAN

Software Engineer · Lagos, Nigeria · Open to Remote

obasantolu@gmail.com / Portfolio / LinkedIn / Github / +234 814 883 6800

SKILLS

Languages JavaScript · TypeScript

Frontend React · Next.js · React Native · Tailwind CSS · Flutter · Material UI · HTML · CSS · Three.js · Zustand · Framer Motion · Jest · Vite · Webpack · Web Accessibility (WCAG)

Backend Node.js · Express · FastAPI · REST APIs · Nest.js

Databases MongoDB · Firebase · Supabase · Postgresql

Observability/Tools AWS · Grafana · Sentry · SonarQube · Figma · Git ·Github · Metabase · Cloudwatch · Lighthouse

EXPERIENCE

Frontend and Reliability Engineer · Lendsqr · Fintech · Jan 2026 – Present

- Improved platform reliability by diagnosing and resolving production issues across frontend, backend, and database layers, reducing recurring system errors through root-cause analysis and targeted fixes.
- Accelerated incident resolution by investigating system alerts and application logs using Sentry and Grafana, identifying failure points and deploying verified fixes through staging and production pipelines.
- Collaborated with cross-functional engineering teams to debug customer-facing issues, implementing fixes across UI, API, and data layers.

Product Operations Officer · Lendsqr · Fintech · Nov 2025 – Jan 2026

- Led second-level support operations by investigating escalated customer issues end-to-end, triaging system alerts via Cloudwatch, querying Metabase for data insights, and creating structured bug tickets in ClickUp to drive engineering resolution.
- Conducted QA testing on engineering bug-fix implementations, verifying resolutions met acceptance criteria before tickets were closed.

Mobile Frontend Developer Intern · Vesti · Fintech · Mar 2024 – Aug 2024

- Built and optimized 7+ core production screens for the Element by Vesti mobile application using Flutter and Firebase, improving usability and reducing navigation friction by approximately 30%.
- Increased product engagement by integrating secure real-time APIs for financial transaction statements, enabling users to download filtered reports directly from the mobile app.
- Delivered responsive, high-performance mobile interfaces by translating UI/UX wireframes and design prototypes into production-ready Flutter components.

PROJECTS

Whossy - Dating & Social Discovery Platform (Web + Mobile) · *React · TypeScript · Tailwind CSS · Zustand · Framer Motion · Flutter · Dart · Firebase (Firestore/Auth/Storage) · Cloud Functions · Node.js*

June 2026

- Alongside the core engineering team, re-engineered the platform's credit monetisation model into a reply-gated system; A credit is held when a chat is initiated, captured only when the recipient replies, and auto-refunded after 48 hours of silence.
- Built challenge-based selfie verification end-to-end across both the React web app and Flutter mobile app: randomised pose challenges at capture, admin review outcomes streamed back via live Firestore subscriptions.
- Maintained overall technical ownership of both applications, hardening build stability, silent backend failures, and unclear user-facing states to bring the platform closer to production readiness.

CBM-EMR · *React.js · TypeScript · Tailwind CSS · Supabase · Express.js · Prisma · Postgresql*

- As Lead Frontend Engineer, I structured and implemented key frontend interfaces and integrations for managing patient, clinical, and operational workflows across the platform.
- Contributed to backend infrastructure development and maintenance, implementing fixes, improving stability, and supporting core API and database functionality.

JobTrackr - Job Board and Application Tracker · *Next.js · React Native · React Query · Zustand · TypeScript · Tailwind CSS · Framer Motion · Nest.js · Node.js · Postgresql*

- Built a full-stack job board and application tracking SaaS platform alongside the mobile application that enables users to search job opportunities, track applications, manage deadlines, and organize follow-ups from one dashboard.
- Implemented intelligent job-matching, resume parsing, and resume review features using Next.js SSR, Zustand, and React Query for server-state synchronisation with an admin dashboard for managing users, job listings, platform activity, and core SaaS operations.

EDUCATION

B.Sc. Computer Science · Covenant University, Ota · August 2025

GPA: 4.51 / 5.00

Data Structures & Algorithms · Software Development Life Cycle · Internet Programming
