PROFESSIONAL SUMMARY

Full-stack engineer who builds and ships complete products, not just interfaces. I've taken apps from first commit to production alone, across React Native and Flutter mobile apps, Node.js and Nest.js backends, and Postgres databases, including payment integration and cloud functions. Comfortable moving between frontend, backend and mobile depending on what the product needs.

B.Sc. Computer Science · Covenant University, Ota · August 2025

GPA: 4.51 / 5.00

SKILLS

Languages JavaScript · TypeScript

Frontend React · React Query (TanStack Query) · Next.js · React Native · Tailwind CSS · Flutter · Material UI · HTML · CSS · Three.js · Zustand · Framer Motion · Jest · Vite · Webpack · Web Accessibility (WCAG)

Backend Node.js · Express · Python (FastAPI) · REST APIs · Nest.js · Prisma · Redis

Databases MongoDB · Firebase · Supabase · Postgresql

Observability/Tools AWS · Grafana · Sentry · SonarQube · Figma · Git ·Github · Metabase · Cloudwatch · Lighthouse

EXPERIENCE

Fullstack Engineer · **Lendsqr** · Fintech · Jan 2026 – Aug 2026

- Diagnosed and resolved production issues across frontend, backend, and database layers through root-cause analysis, reducing recurring system errors and improving platform reliability.
- Investigated system alerts and application logs with Sentry and Grafana to identify failure points, then shipped verified fixes through staging and production pipelines.
- Collaborated with cross-functional engineering teams to debug customer-facing issues, implementing fixes across UI, API, and data layers.

Product Operations Officer · Lendsqr · Fintech · Nov 2025 – Jan 2026

- Investigated escalated customer issues end-to-end, triaging alerts via Cloudwatch and Metabase, writing structured bug tickets, and verifying engineering fixes against acceptance criteria before closing tickets.

Mobile Frontend Developer Intern · Vesti · Fintech · Mar 2024 – Aug 2024

- Built and optimized 7+ production screens for the Element by Vesti mobile app using Flutter and Firebase, cutting navigation friction by about 30%, and integrated secure real-time APIs for transaction statements and report downloads.

PROJECTS

Tendcue - Pharmacy Follow-Up SaaS (Multi-Tenant, White-Labelled) - FOUNDING ENGINEER · *Next.js · Supabase · PostgreSQL · WhatsApp Cloud API · Termii (SMS) · Turborepo* ***Oct 2026***

- **Building a multi-tenant SaaS for pharmacies** to manage patient records, visits and prescriptions, with automatic WhatsApp and SMS follow-up reminders, piloting at Titob Pharmacy.
- **Shipped row-level security multi-tenancy**, a reminder engine with WhatsApp and SMS adapters and delivery webhooks, and white-labelled branding per pharmacy, backed by 300+ automated tests across database, core logic and web.

Whossy - Dating & Social Discovery Platform (Web + Mobile) - FULLSTACK AND MOBILE ENGINEER · *React · TypeScript · Tailwind CSS · Zustand · Framer Motion · Flutter · Dart · Firebase (Firestore/Auth/Storage) · Cloud Functions · Node.js* ***June 2026***

- **Launched reply-gated credits and selfie verification on both the Flutter mobile app and the React web app**. Users now pay only for chats that get a reply, with unused credits refunded after 48 hours, and only verified users can like or message. I did this by building random pose challenges at capture, streaming admin review results back through live Firestore listeners, and writing Cloud Functions to hold, spend and refund credits.
- **Joined an existing dating platform to add new features and get it production-ready for public launch, shipping 170+ commits across web and mobile, backed by 230+ automated tests.** I removed payment secret keys from the web bundle and moved Paystack and Google Play billing, match creation, chat unlocking and account deletion into server-side Cloud Functions. I also tightened the Firestore and Storage security rules.

CBM-EMR - LEAD FRONTEND AND FULLSTACK ENGINEER · *React.js · TypeScript · Tailwind CSS · Supabase · Express.js · Prisma · Postgresql*

- **Led the frontend and full-stack build of CBM-EMR**, a patient, clinical and operational platform, taking it from prototype to production-ready by building the React/TypeScript interfaces, fixing Express/Prisma/PostgreSQL API and database issues, and adding automated backend and end-to-end tests.
- **Made the platform reliable at scale** by moving 12 screens from fixed list limits to server-side pagination and search, and by running a phased hardening plan with verified deployments and clear user-facing error messages.

JobTrackr - Job Board and Application Tracker - FULLSTACK ENGINEER · *Next.js · React Native · React Query · Zustand · TypeScript · Tailwind CSS · Framer Motion · Nest.js · Node.js · Postgresql*

- **Built a full-stack job board and application tracking SaaS platform,** alongside the mobile application that enables users to search job opportunities, track applications, manage deadlines, and organize follow-ups from one dashboard.
- **Implemented intelligent job-matching, resume parsing, and resume review features** using Next.js SSR, Zustand, and React Query for server-state synchronisation with an admin dashboard for managing users, job listings, platform activity, and core SaaS operations.
